

255 - SCO UnixWare Administration II: System Installation, Configuration, and Maintenance

Course Length: 5 Days

Prerequisites:

- Introduction to SCO UNIX Systems
- UnixWare 7 Administration: User Services

Course Objectives:

- Describe the basic hardware configuration of a system
- Describe files and filesystems
- Plan for a successful operating system installation
- Install the UnixWare 7 software and troubleshoot the installation
- Perform post-installation tasks, such as licensing software and creating emergency boot floppy disks
- Manage system startup and shutdown
- Add hard disks and configure filesystems
- Install and manage serial ports
- Install modems
- Install and manage printers and print services
- Install tape drives and CD-ROM drives
- Control user and system processes
- Tune systems for optimum performance
- Prepare for disaster recovery

Course Topics:

Basic Hardware Configuration

Files and Filesystems

Installation Planning

Operating System Installation

Post-Installation Administration

Managing System Startup and Shutdown

Filesystem Configuration and Disk Management

Installing and Managing Serial Ports

Installing Modems

Installing and Managing Printers

Installing Tape Drives and CD-ROMS

Controlling User and System Processes

Managing System Security

Performance Tuning

Disaster Recovery
